

LEGIOOXY®

TARGETED OXIDATION OF LEGIONELLA AND BIOFILM

ADVANCED CATALYTIC OXIDATION

How Does LegioOxy® Work?

1. DOSE

LegioOxy® is introduced into the pipe system in accordance with the technical application instructions.

2. CIRCULATE

The solution must circulate completely through all pipe sections and water outlets.

3. ACTIVATE RADICALS

Highly reactive oxygen species attack the cell membranes, proteins and genetic material of Legionella.

4. OXIDIZE THE BIOFILM

The protective biofilm structure is broken open and oxidatively degraded.

THE ADVANTAGES

- ✓ No energy-intensive high-temperature treatment
- ✓ Acts against Legionella and their protective biofilm
- ✓ Treats complex pipe systems when complete circulation is achieved
- ✓ Short contact time according to Watch Water application instructions

IMPORTANT

Complete eradication may only be confirmed after correct dosing, sufficient contact time, complete circulation and subsequent microbiological testing.

LEGIOOXY - OXIDATION INSTEAD OF HEAT ALONE.
