

LonGeVa™ Water

WOULD DRINKING HEAVY ATOMS
LENGTHEN OUR LIVES?

A sip a day of LonGeVa™ Water could reduce damage to aging tissues that is caused by oxygen free radicals.

HEAVY WATER, TO BE PRECISE,
HAS THE CHEMICAL FORMULA:

D₂O
HEAVY WATER

The D stands for Deuterium, an isotope of Hydrogen (H) with an atomic mass of 2 instead of 1.

Deuterium is what makes water "heavy."

An ice cube made from LonGeVa™ Water would sink in normal water, demonstrating its higher density.
