A MESSAGE TO THE ENTIRE WATER TREATMENT INDUSTRY

TUNE YOUR WATER TREATMENT.

Like a radio or TV, the right settings make the difference.

Every water source is different. Choose suitable media, start with the recommended settings, and adjust according to measured results.

1 ADJUST THE FLOW

Lower BV/h gives the water more contact time with the media.

2 SIZE THE MEDIA BED

More media at the same flow reduces loading per litre of media and increases contact time.

3 MATCH THE WATER CHEMISTRY

Check pH, contaminant load and pretreatment needs for the selected media.

4 VERIFY THE RESULT

Compare inlet and outlet quality. Adjust, test again and confirm the required performance.

THE WATER SETS THE CONDITIONS. THE RESULTS GUIDE THE SETTINGS.

Tune within the manufacturer's operating limits. Some applications need a different treatment step.
