VirolOxy®
MOULD & FUNGI
THE 5% SURFACE TREATMENT

5% SOLUTION | **30** MINUTES | **CLEAN-WATER RINSE**

Application method specified by Watch Water.

01 CHECK THE SURFACE
For compatible, washable hard surfaces with visible mould or fungal contamination. Test a small area first. Porous or deeply affected materials need separate assessment.

02 PREPARE THE SOLUTION
Prepare a **5% VirolOxy®** solution according to the current Watch Water application instructions. Follow the specified concentration basis and mixing method.

03 APPLY THOROUGHLY
Spray the affected surface where permitted by the product label. Wet the contaminated area thoroughly using controlled application. Avoid airborne mist and do not dry-brush mould.

04 ALLOW 30 MINUTES
Leave the treatment in contact for 30 minutes. Keep the surface wet throughout the contact period. Do not rinse prematurely.

05 RINSE AND REMOVE
Rinse with clean water and remove loosened contamination and treatment residues. Handle runoff appropriately. Allow the surface to dry thoroughly.

06 ADDRESS THE DAMPNESS
Repair leaks, reduce condensation and improve ventilation. Persistent moisture can allow mould to return after cleaning.

WORK WITH CARE
Wear suitable protective gloves and eye protection. Protect skin, ventilate the work area and avoid inhaling spray. Do not mix with other cleaning products. Follow the current label and safety data sheet.

APPLY • WAIT • RINSE • DRY

5% / 30-minute protocol supplied by Watch Water. Use only as permitted by the current product label and application sheet.
