

# WATCH AMIN

## FILM-FORMING AMINES (FFAs)

---

### THE NEXT GENERATION BOILER PROTECTION

#### ■ Innovative Surface Protection

Creates a hydrophobic film on metal surfaces, preventing water-induced corrosion

#### ■ Supplement to Conventional Treatment

Works alongside oxygen scavengers, pH control, and pretreatment for ultimate system reliability

#### ■ Reduced Metal Transport

Minimizes iron & copper carryover - less under-deposit and flow-accelerated corrosion

#### ■ Effective in Complex Systems

Ideal for reboilers, mixed metallurgy, high-purity feedwater, and condensate return

#### ■ Proven Performance

Lower corrosion rates, improved integrity of pipes and equipment, extended asset life, and reduced maintenance
